

A strategic game about
star evolution and a race to map
the constellations for 1-4 players

NEBULA

A PREVIOUSLY UNIDENTIFIED AREA OF
SPACE HAS BEEN PHOTOGRAPHED BY A
DEEP SPACE TELESCOPE... CAN YOU BE THE
FIRST TO MAP THE NEW STARS?

As astronomers, the players try to be the first
to identify the stars forming in this new nebula!

Players draft their constellation cards of star patterns to match and then take turns
laying tokens to evolve stars into new combinations. Players need to try and build
up to their unique set of constellations while helping or hindering opponents. As
stars evolve into more mature neutron stars and nebulas the constellations become
more difficult to build. The more constellations discovered the faster gameplay
becomes, with the risk of losing ground if a black hole destroys whole areas!

**BE THE FIRST PLAYER TO MAP THE STARS
BY DISCOVERING THE CONSTELLATIONS AND
DISCARDING ALL YOUR CARDS TO WIN!**

Bonus booklet included about the science of star formation

HIGHLIGHTS

- Card drafting
- Tile placement
- Sequence building
- Strategy
- Hidden information
- Matching
- Hand management
- Take that
- Space exploration
- Science: Astronomy

COMPONENTS:

- 1 game board
- 12 large Blue/Red/
Yellow star tokens
- 12 small Supernova/
Neutron Star/Black
Hole tokens
- 48 Constellation cards
